

The **MTV** series describes Linear Units with precision ball screw drive, integrated guide rail and compact dimensions. They provide high performances features, such as high speeds, good accuracy and repeatability.

They can easily be combined to multi-axis systems.

Excellent price-/performance ratio and quick delivery time are ensured.

The compact, precision-extruded aluminum Profile from 6063 AL with integrated Zero-backlash Ball rail guide system, allows high load capacities and optimal cycles for the movement of larger masses at high speed.

In the Linear Units MTV a precision ball screw, with tolerance class ISO7 (ISO5 on request), with reduced backlash of the ball nut is used.

A corrosion-resistant protection strip, protects all the parts in the profile from dust and other contaminants. The aluminum profile includes T-slots for fixing the Linear Unit and for attaching sensors and switches. Also, a Reed switch can be used here.

The carriage, with central lubrication port, allows easy central re-lubrication of ball screw and Ball rail guide and provides the possibility to attach additional accessories on the side.

For the Linear Units MTV various adaptation options, for attaching (or redirecting), for Motors or Gearboxes are available.

To achieve higher speeds at the same stroke of the linear unit, the ball screw support system can be integrated. With this feature vibrations and deflections of the ball screw are reduced, therefore longer strokes are possible. The linear unit with integrated support system can have a higher axial load capacity. Ball screw supports are made out of high quality plastic materials with high wear resistance properties. Our system enables ball screw support in horizontal or vertical positioning of the linear unit.

A 2LR version of MTV linear unit is available, where two carriages are moving simultaneously in opposite directions. Both right and left handed precision ball screws are used, which are rigidly connected. The ball screw support system can also be integrated.

i 2LR version of the MTV linear unit

i The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Straightness = 0,35 mm/m; Max. torsion = 0,35 mm/m; Angular torsion = 0,2 mm/40 mm; Parallelism = 0,2 mm

STRUCTURAL DESIGN

Standard version

- 1 - Drive block with floating bearing (MTV 110 - fixed bearing)
- 2 - Corrosion-resistant protection strip
- 3 - Ball screw tolerance ISO7 (ISO5 available on request)
- 4 - Carriage; with built in Magnets
- 5 - Aluminium profile-Hard anodized
- 6 - Integrated Linear Ball Guideway
- 7 - Central lubrication port; both sides
- 8 - End block with fixed bearing (MTV 110 - floating bearing)
- 9 - Screw support - SA

2LR version

- 1 - Carriage; with built in right hand ball nut
- 2 - Right hand ball screw
- 3 - Carriage; with built in left hand ball nut
- 4 - Left hand ball screw
- 5 - Central screw support - fixed
- 6 - Screw support - SA

1 Max. travel speed depends of the length of the linear unit, see diagram for particular size of the linear unit. For travel speed and acceleration over the stated value in the table above or diagrams please contact us.

2 For the ball nut with the preload of 2%, please contact us.

3 With SA or 2LR version the max. rotation speed is limited to 3000 rev / min.

4 For minimum stroke below the stated value in the table above please contact us.

5 In the case of 2RL version the axial load is total axial load of both carriages.

* Absolute stroke [mm]

A - Distance between carriages [mm]. More info on following pages.
nc - Number of carriages

** The stated values are for strokes (and for distances between the carriages A) up to 500mm.
No Load Torque value increases with stroke (and with A) elongation.

i Mass calculation doesn't include mass of motor, reduction gear, switches and clamps.

Deflection of the linear unit

Fixed - fixed mounting

δ Maximum deflection of the linear unit [mm]
δ_{max} Maximum permissible deflection of the linear unit [mm]
F Applied force [N]
L_p Unsupported profile length [mm]

Fixed - free mounting

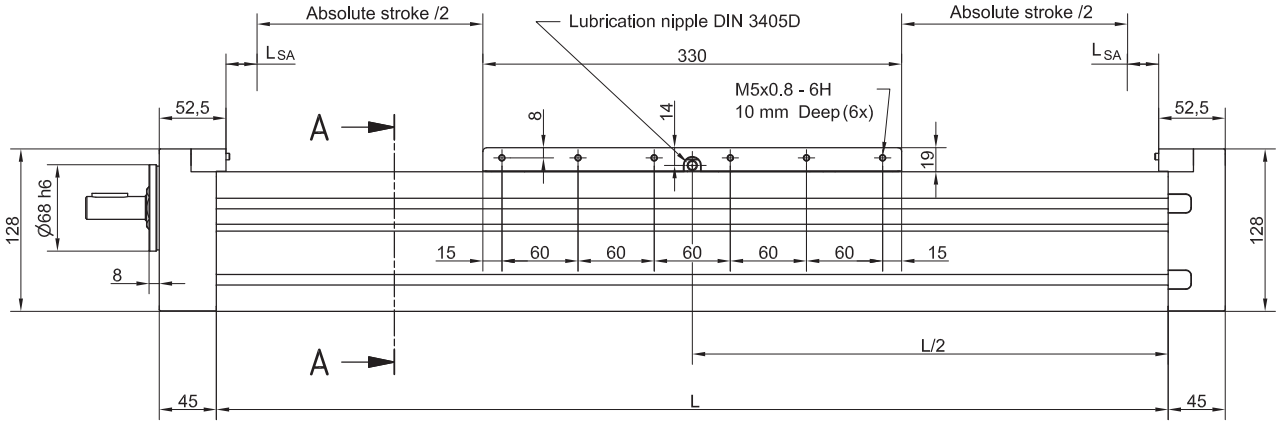

i The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

MTV 110

DIMENSIONS

i Linear Unit doesn't include any safety
Absolute stroke = Effective stroke + 2 x Safety stroke stroke.

i Journal with or without keyway.

n _{SA}	L _{SA}
0	24,5
2SA	28,0
4SA	59,0
6SA	90,0
8SA	121,0
10SA	152,0

i All dimensions in mm;
Drawings scales are not equal.

L_{SA} Additional length [mm]

Defining of the linear unit length

L = Effective stroke + 2 x Safety stroke + Lv + 2 x L_{SA} + A x (n_c - 1) + 15 mm

L_{total} = L + 90 mm, Lv = 330 mm

Multiple carriages

A ≥ Lv **i** Connection between the carriages must be provided by the customer

n_c - Number of carriages

i All dimensions in mm.
Drawings scales are not equal.

Mounting the drive

- by the **MOTOR SIDE DRIVE - MSD** (Page 7.095.0)
- by the **MOTOR ADAPTER WITH COUPLING** (Page 8.020.0)

i Available on request.

Maximum travel speed as a function of the profile length (V_{max} - L curves)
